

# Install Visual Studio Code Update in Practice Lab

If you see a message about an update being available for Visual Studio Code when you start it in the Practice Lab and you would like to install the update:

1. Click on the **Download Update** button displayed when VS Code is started.
2. Click the **button** for **.deb** file with the latest version of Visual Studio Code.
3. The update file will be called something like: **code\_1.86.1-1707298119\_amd64.deb**  
*(it's ok if the numbers are different as long as it starts with code\_)*
4. Close VS Code
5. Open a **Terminal** window.
6. Change to the Downloads folder: `cd ~/Downloads`
7. Enter the command: `sudo dpkg -i <name-of-file-downloaded>`  
  
Hint: After typing the `-i` part of the command type, just the first part of the name, `code_` and press the tab key. The remaining part of the name will be filled in.
8. Open **File Manager**, navigate to the **Downloads** folder and delete the downloaded file
9. Open Visual Studio Code. You should not see the update screen.
